Innovation Strategies in a Slow World Economic Growth

Prof. Dan Breznitz

University of Toronto, Canada
Co-director, The Innovation Lab

Based on his work for his award winning books, Dan Breznitz will contend that contrary to popular belief, under the current conditions of intensified Globalization, emerging economies have more options for developing their high technology industries, then at any time since WWII. His research, based on extensive fieldwork, shows how state actions shaped the structure of their ICT industries. Building on theories from political science, economic geography, evolutionary economics, and global production decomposition his work provides a basis to advance a theoretical framework for analyzing how different choices lead to long-term consequences and to the development of successful, and radically different industrial systems.
